Event Scout — Components Map

Problem statement: **Industry Event Scout**
Live app: **event-scout-five.vercel.app**
Repo: **github.com/vyombhatnagar-lgtm/event-scout**

Vikram, an independent consultant, wins 40% of new business in rooms with decision-makers but loses ~45 minutes every Monday hunting fragmented listings — and still misses deadlines. Event Scout pulls live events from many sources, ranks them for his focus areas with **Gemini Flash**, flags registrations closing within 7 days, and delivers a Monday 06:30 IST briefing plus a daily "Today" view.

1 · LIVE SOURCES

- **Eventbrite** — listing + event pages
- **Luma** — Discover JSON
- **Meetup** — schema.org
- **AllEvents** — 3 cities
- **NASSCOM** — events page
- **iSPIRT** — ProductNation feed
- **Web search** — Gemini + Google
- **Your sources** — page · RSS · iCal
- **Add from a link** — Paste a LinkedIn post or email — Gemini extracts the event, verified against the text

→

2 · DISCOVERY ENGINE

- **Connectors** MANDATORY — One per source; a failure never blocks others; per-run stats in *source_runs*
- **Normalise + validate** — Zod schema, http(s) only, unknowns stay null — never guessed
- **De-duplicate** — source id → URL → title + IST date + city; every source link kept
- **Deadline detail** — Eventbrite ticket-sales end, Luma ticket end; earliest kept on conflict
- **Scheduler** — Vercel Cron · 05:00 IST daily · CRON_SECRET protected

→

3 · STORE + INTELLIGENCE

- **Neon Postgres** — events · event_sources · scores · pipeline · checklist · custom_sources · digest_runs · job logs. 4 versioned migrations, run on every deploy
- **Gemini Flash** MANDATORY — Classify · summarise · extract deadlines & events · score fit (0–100 + reason)
- **Hybrid ranking** — 35% preference rules + 65% Gemini; hard caps for wrong city / format
- **Anti-invention guard** — Every AI claim must quote the source text; quota stops never fail the run

→

4 · WHAT VIKRAM USES

- **Today** — Brief · 2-week day strip · one-at-a-time decision cards (Not for me / Save / Register) · Closing soon rings · You're going · This week + From last week · Week at a glance
- **Monday briefing** MANDATORY — 06:30 IST via Resend · urgent first · sent once per week (idempotent) · 08:00 retry
- **Explore · My events · Event page** — Photo-card grid, colour-coded pipeline lanes, full detail with "why it fits"
- **Calendar + Calendly** ENHANCEMENT — Google Calendar link / .ics with "registration closes" reminder · booking link
- **Settings + Status** — Categories, cities, topics, min score, sources — no redeploy · source health & job log

Next.js 16 · TypeScript	Vercel	Neon	Gemini Flash	Resend	Tests
App Router, Cache Components	Hosting + 3 cron jobs	Serverless Postgres	3.8 → 3.6 → 3.5 fallback	Email, idempotency keys	67 unit · 7 live-source

All AI tasks use Gemini Flash only — no Claude API in the application.

How each part maps to the brief

✓ = implemented and verified by a test or a live production run

	COMPONENT	WHAT IT DOES	CODE
1	**Discovery engine**	Eight live sources + add-from-link; per-source run stats	`lib/discovery/connectors`
2	**Normalisation**	Canonical event schema; invalid records rejected with a reason	`types/event.ts · normalise.ts`
3	**Duplicate detection**	Merges the same event across sites; never on title alone	`discovery/deduplicate.ts`
4	**Gemini Flash intelligence**	Classify, summarise, extract, score — validated JSON, paced, quota-aware	`lib/ai/*`
5	**Preferences**	Categories, cities, topics, formats, min fit — stored in DB	`settings · api/preferences`
6	**Deadline intelligence**	Stated deadlines only; <7 days = urgent; IST; conflicts flagged	`lib/deadlines.ts`
7	**Today view**	Decision cards, day strip, countdown rings, week at a glance	`app/(app)/dashboard`
8	**Event pipeline**	Saved → To register → Registered → Attended → Followed up	`app/(app)/pipeline`
9	**Weekly checklist**	Actions from real events + “From last week” carry-over	`lib/checklist/*`
10	**Monday briefing**	Next 30 days, urgent first, links to register / calendar / source	`lib/digest · email/templates`
11	**Email delivery**	Resend; one send per week guaranteed; every attempt logged	`lib/email/send.ts`
12	**Calendar**	Google Calendar link + .ics with deadline reminder, no sign-in	`lib/calendar/ics.ts`
13	**Calendly**	Booking link for follow-ups (Settings, Today, briefing)	`preferences.calendlyUrl`
14	**Observability**	Source health, job history, config check; quota ≠ failure	`app/(app)/status`

REQUIREMENT (BRIEF)	EVIDENCE	
Live external data	187 real events in production	✓
Aggregate many sources	Eventbrite, iSPIRT, conference sites, newsletters, LinkedIn (paste), web	✓
Gemini Flash only	All AI calls; non-Flash models refused	✓
Domains & cities, no code	Settings page → database	✓
Rank by focus areas	Rules + Gemini score with reason	✓
Next 30 days	Discovery window + digest	✓
<7-day deadline flag	9 live urgent flags; boundary tests	✓
Scannable in <5 min	Memo-style briefing, urgent first	✓
Monday morning email	Cron 06:30 IST; sent + duplicate blocked	✓
Deployed on Vercel	event-scout-five.vercel.app	✓
GitHub + Components Map	Public repo · this document	✓

Known limits: free Gemini quota (~20 requests/day/model) delays some AI ranking to the next run; most listings publish no deadline (shown as “Deadline unknown”).
